

## **SECURE CHECK SYSTEM FOR MULTI-OFFICE BUSINESS STREAMLINES ORDERING, FIGHTS FRAUD**

### **The Customer Challenge**

A successful heating and air conditioning business, with 20 locations, faced big problems with their decentralized, fragmented check orders. Each office ordered business checks from a different vendor with no consistency in design or logo use. Some checks had security features while others had no security features at all, leaving them vulnerable to fraud. To make matters worse, order prices were just as inconsistent. They needed a secure, streamlined system *fast*.

### **The Wilmer Program Solution**

We were able to address every issue this large business faced by setting up a format for all of their office locations to order checks from one centralized place. Each office was able to choose among four colors to be used with a one pantograph and logo that was consistent for every office, giving their checks a uniform look company-wide. With 12 security features built in, our checks gave added protection against costly check fraud.

### **The Payback**

Our one-source ordering solution made it simple for each branch to order checks and helped the company easily save over \$500 with this new system, and eliminate costly potential fraud.
